Lenght: 8,5 км. Time: 3-4 h. Difficulty: Easy.

Haidushki waterfalls are hidden in a mountains valley below peak Kom. An asphalt road leads to the beginning of the eco-touristic path. The road is not in good condition, but still acceptable. The river valley is very picturesque with numerous rapids and small falls. Dirt road with touristic marking goes to waterfalls.

The waterfalls are at the place where three small rivers gather into one. They are not too high, but still very beautiful. Places for picture shooting and observation are built at the spot as well as picnic facilities like fireplace and benches.

Our visit was in December, not the most suitable time of the year. It was rainy, foggy and gloomy. Due to the ceaseless rain we could not pass the entire path which was two time longer than our track. Nevertheless the place left us with unique impression and the confidence that we will visit it again.
